Call for papers

The conference brings together an international and interdisciplinary field of researchers. The unifying interest in the conference is scientific questions about the horse as well as the horse in society and the relation between humans and horses. In focus for the conference this year are questions regarding past, present and future challenges in relation to horse – human activities and interaction. Horse welfare and ethical issues regarding horses and horse keeping are a common thread through all the sessions. Since the conference theme put emphasize on future challenges we have added an opportunity for researchers to present their results during what we call two speed-dating sessions with representatives from educational organizations and students.

The conference will hold following sessions with oral presentations organized in five themes:

**Theme One: Psychological, pedagogical and didactic perspectives on the relation between human and horse.** The theme also includes challenges for equestrian coaching. Within this theme we invite papers that address the demands of educating people that handle horses in different ways. We also address issues regarding new demands, such as mental and physical challenges, on riders when conditions for sport and recreation in companionship with horses are developed.

**Theme Two: Historical, philosophical and ethical perspectives on human-horse relationships**
Within this theme we invite papers that specifically explore historical, philosophical and ethical questions regarding interspecies communication and aspects on horse-handling in both the past, the present and in the future.

**Theme Three: Consequences for the human-horse relationships connected to the lifestyle of modern humans – for example leisure, sport, tourism, technology and media.**
Within this theme we invite papers that explore human-horse interactions through tourism, sports and leisure in the light of modern lifestyle such as for example globalization and social media. Consequences of modern technology in our interaction with horses are also welcomed in this theme.

**Theme Four: Issues related to equine assisted therapy, in relation to the human body, mind and social work**
Within this theme we address questions about practical and ethical implications, as well as considering future challenges and advantages of using the horse in equine assisted therapy in relation to both psychological and physical treatment and other arenas for social work.

**Theme Five: We will also organize open sessions for those of you who would like to address an issue outside of the sub-themes.**
We also invite social science and humanistic research that focuses on other aspects of challenges we stand for in the human-horse relationship. What we can learn from the past and how to approach the future.

**We will also have two sessions with “Speed-dating”.**

**Speed-dating session 1:**
During this session you as a researcher will be given the opportunity to present your results to some representatives from different levels of equine education’s and discuss how your results can be implemented in to the education.
**Speed dating session 2:**
During this session you as a researcher will be given the opportunity to discuss your results with students at the equine studies program on university level. This can be done for two purposes, either you take the opportunity to present and discuss your research results directly to “the next generation” for it to become implemented in their upcoming working life. Or you take the opportunity to pitch an idea for future research based on your result, that can be done either within the student’s education or in a future dissertation.

**Abstract submission**
We welcome researchers with diverse backgrounds, both disciplinary, theoretical and methodological. We welcome submissions from colleagues at any stage of their academic career. Please make a note if you recently received your PhD, we are trying to give a special slot for you in the programme. You can submit your abstract to both an oral session and a speed-dating session. **The abstract should be submitted to Susanne.Lundesjo-Kvart@slu.se** at latest 31 January.

**Submissions should include:**
Title of the presentation, an indication of which theme the paper falls under, four key words, an abstract of maximum 250 words, author(s) and affiliation, author bio (max 100 word).

A **Best presentation award** will be given to honour the memory of Karen Dalke that tragically past away soon after the conference in Leeds. Applicants should just make a note about this when submitting their abstracts.

**The Solidarity Prize for Excellence in Early Career Equine Research**
This award recognizes high quality early career equine research and supports a junior scholar with excellent potential. Current graduate students and those who received their PhDs in 2016 or later who will be presenting at the Equine Cultures in Transition conference at the Swedish University of Agricultural Sciences in Uppsala and Swedish Equestrian Centre of Excellence at Strömsholm, Sweden, June 16-18 2020, are invited to submit their work. To be eligible, papers must consider one or more of the following: equine and/or human-horse wellbeing, work and labour issues, interspecies ethical and/or methodological possibilities. Applicants should submit their conference papers of approximately eight pages in length along with a short biography to Kendra Coulter at kcoulter@brocku.ca by June 1st, 2020. Submissions will be assessed by a jury of leading human-horse researchers and the winner will be honoured at the conference. The prize includes $250CDN.

**Important dates:**
- 1 November: Abstract submission opens
- 31 January: Deadline for abstract submission
- 17 February 2020: Registration open
- 28 February 2020: Notification of acceptance
- 27 April 2020: Deadline early bird registration
- 28 May 2020: Deadline registration

You are also welcome to send questions to: Susanne.Lundesjo-Kvart@slu.se.
