Cisco Secure Client (previously AnyConnect) for iOS

How to install and connect to VPN with Cisco Secure Client.

Download the Cisco Secure Client app

- Open App Store on your phone or tablet and search for and download Cisco Secure Client

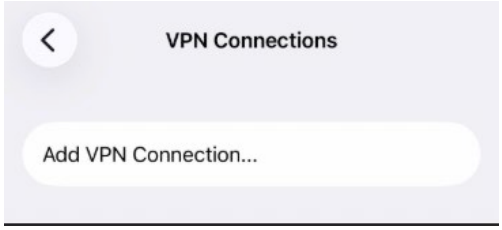

Configure VPN

- Open the Cisco Secure Client app and press **Connections**

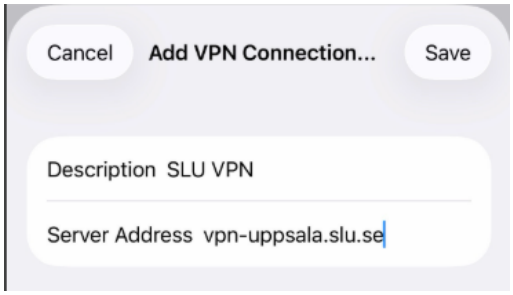

- Press **Add VPN connection**

- Enter **Description**, e.g. SLU VPN, and then fill in **Server Address** to the location you want to connect to according to the table below

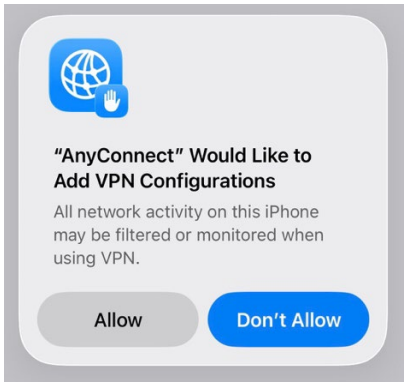

Ort	Adress
Alnarp	vpn-alnarp.slu.se
Skara	vpn-skara.slu.se
Umeå	vpn-umea.slu.se
Uppsala	vpn-uppsala.slu.se

For example, connecting to Uppsala:

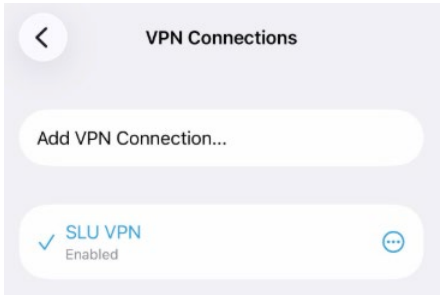

- No additional settings needs to be altered. Press **Save**

- Press **Allow** when prompted about adding VPN configuration

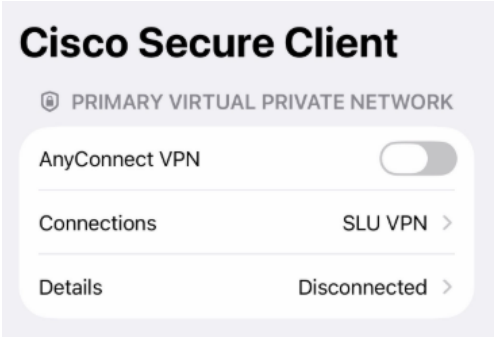

- Your VPN is now configured and added

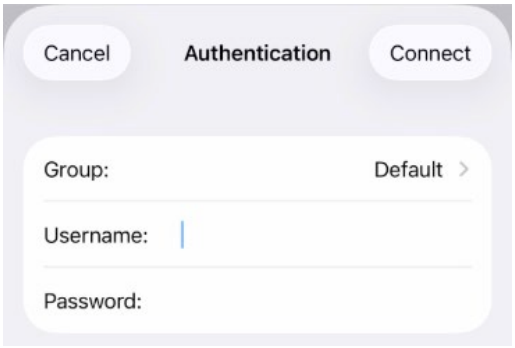

- If you want to add another server, press Add VPN Connection. Otherwise press the back arrow on the top left

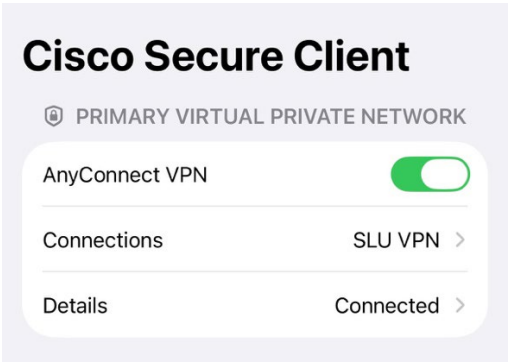

- To connect, toggle the switch next to AnyConnect VPN

- Enter your SLU username (not the entire email address) and password and press **Connect**

- The connection should now be established

- To disconnect, toggle the switch again
